

Evolving InstaCalc from today's notebook to the Studio, one toggle at a time

We like our foundation — so this demo starts from the current Smart Math Notebook, pixel-faithful, and layers each dimension from the /evolve exploration on top as an **independent toggle**. Flip any of them off and you're back to today. Flip them all on and you're standing in the Studio. Every state is live (the calc always computes) and every state is a URL.

1 Living editor

2 Share & remix chrome

3 ⌘K omnibox

4 Workspace rail

5 Up next rail

6 Gallery shelf

7 View modes

Drive it yourself at instacalc.com/evolve/evolver.html — keys 1–7 toggle dimensions, 0 = today, 9 = everything, presets in the 🧬 panel.

[Dashboard](#) | **Smart Math Notebook** [Share Link with Data](#)

NOTEBOOK EDITOR

```
# Party budget 🎉
guests = 30
costPerPerson = 18
food = guests * costPerPerson
venue = 250
music = 120
total = food + venue + music
perGuest = total / guests
```

RESULTS

guests	30
costPerPerson	18
food	540
venue	250
music	120
total	910
perGuest	30.33

Our current Smart Math Notebook, reproduced exactly: two panes, live green results, share button. This foundation is good — everything that follows is addition, not replacement. Every toggle below can be turned off to get back to exactly this.

01 + Living editor

[evolver.html?on=syntax](#)

[Dashboard](#) | **Smart Math Notebook** [Share Link with Data](#)

NOTEBOOK EDITOR

```
# Party budget 🎉  
guests = 30  
costPerPerson = 18  
food = guests * costPerPerson  
venue = 250  
music = 120  
total = food + venue + music  
perGuest = total / guests
```

RESULTS

guests	30
costPerPerson	18
food	540
venue	250
music	120
total	910
perGuest	30.33

The lowest-risk upgrade: syntax highlighting (numbers blue, comments muted) and a signal hierarchy in the results — computed answers bold and bright, plain inputs dimmed. Nothing moved; the same screen just reads faster.

02 + Share & remix chrome

18
540
250
120
910
30.33

The calc becomes an object with an identity: a name, an author, an autosave heartbeat, star/remix counts. "Share Link with Data" grows into a social loop — this is the change that makes a gallery possible.

The screenshot shows a web application titled "Party Budget" by kazad. The interface is split into three main sections: a code editor on the left, a command palette in the center, and a results column on the right.

Code Editor (NOTEBOOK EDITOR):

```
# Party budget 🎉
guests = 30
costPerPerson = 18
food = guests * costPerPerson
venue = 250
music = 120
total = food + venue + music
perGuest = total / guests
```

Command Palette (⌘K):

Type a calc, command, or math...

RECENT

- Party Budget
- Japan trip

ACTIONS

- New calc
- Browse gallery
- Share current calc

Results Column (RESULTS):

guests	30
costPerPerson	18
food	540
venue	250
music	120
total	910
perGuest	30.33

One box in the header: search calcs, run commands, or just type math. Shown open here. This is pure addition — mouse users never need it, keyboard users never need anything else.

04 + Workspace rail

evolver.html?on=syntax,social,omni,rail

The screenshot displays the 'Party Budget' workspace interface. The top bar includes the title 'Party Budget' by kazad, a search bar for 'calcs, commands', and buttons for 'Star', 'Remix', and 'Share'. The left sidebar is divided into three sections: 'WORKSPACE' with 'Home' and 'My calcs' (12 items), 'COLLECTIONS' with 'Events', 'House hunt', and a '+ New collection' button, and 'GALLERY' with 'Finance' (412), 'Health' (187), and 'Travel' (88), plus a 'Browse all 1,642' link. The central 'NOTEBOOK EDITOR' contains the following code:

```
# Party budget 🎉
guests = 30
costPerPerson = 18
food = guests * costPerPerson
venue = 250
music = 120
total = food + venue + music
perGuest = total / guests
```

The right 'RESULTS' panel shows the calculated values:

guests	30
costPerPerson	18
food	540
venue	250
music	120
total	910
perGuest	30.33

Your stuff appears on the left: My calcs, collections, the gallery door. The editor gives up ~210px and gains a filing system. Collapsible — the [key brings back the full-width view.

05 + Up next rail

evolver.html?on=syntax,social,omni,rail,upnext

The screenshot shows a web application titled "Party Budget" by kazad. The interface is divided into four main sections:

- Workspace:** A sidebar on the left with a "My calcs" collection containing 12 items, and a gallery of other collections like Finance (412), Health (187), and Travel (88).
- Notebook Editor:** The central area where the user has defined variables and formulas for a party budget:

```
# Party budget 🎉
guests = 30
costPerPerson = 18
food = guests * costPerPerson
venue = 250
music = 120
total = food + venue + music
perGuest = total / guests
```
- Results:** A column on the right that displays the calculated values for each variable in the notebook editor, such as 30 for guests, 540 for food, 250 for venue, 120 for music, 910 for total, and 30.33 for perGuest.
- Up Next:** A sidebar on the far right that suggests related calculators, including "BMI & Calorie Target", "Startup Runway", "Paint Coverage Estimator", and "Retirement Savings Proje...", along with a "Trending Today" list.

Related calcs and trending on the right — browse without leaving your work. This is YouTube's best idea grafted onto ours: the next interesting thing is always visible but never in the way.

The library moves under the editor: trending cards with live previews, tabs, one click to remix. At this point browse and create share one screen — the Studio layout, grown from our own foundation.

The screenshot shows the 'Party Budget' calculator in the 'Notebook' view. The interface is divided into several sections:

- Header:** Includes the title 'Party Budget' by kazad, a search bar, and action buttons for Star, Remix, and Share.
- Workspace:** A sidebar on the left with 'My calcs' (12), 'Starred', 'Collections' (Events, House hunt, New collection), and 'Gallery' (Finance, Health, Travel, Browse all 1,642).
- Notebook Editor:** The main area for editing the calculator code. It shows the following code:

```
# Party budget 🎉
guests = 30
costPerPerson = 18
food = guests * costPerPerson
venue = 250
music = 120
total = food + venue + music
perGuest = total / guests
```
- Results:** A column on the right showing the calculated values:

```
30
18
540
250
120
910
30.33
```
- Browse the gallery:** A section at the bottom showing a grid of other calculators, including 'Mortgage Payoff Planner', 'Tip & Bill Splitter', 'Compound Interest Visualizer', 'Recipe Scaler', 'Road Trip Fuel Cost', and 'Freelance Hourly Rate'.
- UP NEXT:** A sidebar on the right showing a list of calculators to explore next, such as 'BMI & Calorie Target', 'Startup Runway', 'Paint Coverage Estimator', and 'Retirement Savings Proje...'. It also includes a 'TRENDING TODAY' list.

The final dimension: a lens switcher above the stage. Notebook stays the author's home; the next three pages show the same calc through the other lenses — no new data, no new engine.

For the person you send it to: inputs become fields, formulas hide, answers become headline numbers. Edit a value and everything recomputes from the same model — zero syntax exposure. This is live in the demo, not a mock.

Evolve the UI 2/7 applied

Today (baseline)

The Studio (all on)

1 Living editor

Syntax highlighting; computed answers bold, plain inputs dim. Same bones, sharper signal.

☒

2 Share & remix chrome

Title, byline, star/remix counts. The calc becomes a shareable object with an author.

☒

3 %K omnibox

Search, commands, or raw math from one box — the whole nav for keyboard people.

☐

4 Workspace rail

My calcs, collections, gallery door. Your stuff, one glance to the left.

☐

5 Up next rail

Related calcs + trending on the right — browse without leaving your work.

☐

6 Gallery shelf

The library under the editor; trending cards, tabs, one click to remix.

☐

7 View modes

Notebook / Sheet / Form / Widget — one model, four lenses, picked per audience.

☐

Evolve 2/7

How you drive it: each dimension is an independent toggle (keys 1–7), with presets for Today and The Studio. State lives in the URL, so any combination is a shareable link — argue about a specific step by sending it.
