

DESIGN EXPLORATION · JULY 2026 · V2 — UNIFIED THEME

InstaCalc */evolve*

20 skeletons, one skin

Twenty homepage + calc-navigation concepts, each borrowing the skeleton of an app people already know — Reddit's feed, Wikipedia's reference density, McMaster-Carr's catalog speed, Airbnb's marketplace warmth. The product never changes: live editable calcs, a browsable gallery, search, sharing, remixing. Only the bones move: top bar, side rail, feed, grid, canvas, full-screen.

Unlike v1, every concept now wears **today's InstaCalc theme**: the current dark palette (#0d0d0d bg, #222 borders, blue accent, green results), Inter + JetBrains Mono, black editor panes — so you're comparing structure, not skin. The site's light theme works everywhere too (press T on /evolve; one example page at the back).

Every calc in these screenshots is a real, live evaluator. Flip layouts with ← →, press G for the overview grid.

instacalc.com/evolve · branch [claude/instacalc-ui-layout-gallery](#) · built from [jshell.com](#)

The lineup

same product, twenty skeletons — press G on /evolve for this view

01 One Box · Google

The homepage IS the calculator. One input, instant answer card, gallery demoted to trending links.

02 The Feed · Reddit

Gallery becomes a ranked feed: upvotes, remix counts, topic communities (c/finance). Great for discovery, calc opens in place.

03 The Reference · Wikipedia

Every calc is a reference article: dense internal links, contents rail, live calc as the “infobox”. Authority through plainness.

04 The Catalog · McMaster-Carr

Ruthless density and speed: every calc is a part with specs. Filter rail, instant search, zero decoration. For power users.

05 The Marketplace · Airbnb

Calcs as destinations: big friendly search pill, category chips, preview-forward cards with ratings and saves.

06 The Directory · Craigslist

Zero design as a feature: the entire gallery on one page as plain links. Fastest possible scan; nothing competes with the content.

07 The Ranking · Hacker News

Pure ranked list with points and comments. The first item expands inline — using a calc never leaves the list.

08 The Superstore · Amazon

Search-dominant with facet filters and heavy trust signals: ratings, usage counts, “used this month”. Calc gets a Buy-Box.

09 The Channel Grid · YouTube

Calcs as videos: preview thumbnails with a “6 steps” badge, author channels, chips for topics. Subscriptions = follow calc authors.

10 The Shelves · Spotify

Library with horizontal shelves (“Made for you”, “Trending”) and playlists as calc collections. The open calc lives in a persistent now-playing bar.

11 The Workspace · Notion

Calcs as pages in a personal workspace: sidebar tree, breadcrumbs, blocks. Gallery is a linked database at the bottom of the page.

12 The Command Line · Linear

For heavy users: dense triage list, side peek, and a ⌘K palette as the primary navigation. Everything reachable without the mouse.

13 The Repo · GitHub

A calc is a repo: stars, forks (“remixes”), history, README. Naturally social + versioned — remix culture made explicit.

14 The Pitch · Stripe

A real marketing homepage: hero with a floating live product demo, social proof, feature triplet. For the logged-out first impression.

15 The Grid · Excel

Meets spreadsheet users where they live: ribbon, formula bar, editable cells with row/column headers, sheet tabs as multiple calcs.

16 The Canvas · Figma

Calc as an object on an infinite canvas: layers panel lists every line, properties panel controls format/units/decimals. Community tab = gallery.

17 The Wall · Pinterest

Pure visual browse: masonry of calc “pins” at mixed sizes — some show working, some just the big answer. Save to boards = collections.

18 The Keynote · Apple

Radical focus: huge type, one device frame, generous whitespace. The gallery appears only as a teaser band. Sells the feeling, not the features.

19 The Clubhouse · Slack

Community-first: topic channels, calcs shared as unfurled live cards inside conversation, reactions as lightweight ratings.

20 The Stream · TikTok

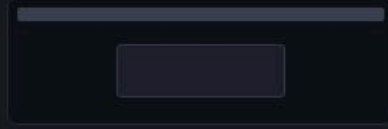

Full-screen, one calc at a time, swipe to browse. Remix/like/share as first-class gestures. Gallery becomes a For-You feed of math.

The switcher /evolve opens on this overview — click any card, or arrow-key through layouts

InstaCalc *levolve*

20 homepage + calc-navigation concepts, each borrowing the bones of a familiar app. Same product — live calcs, gallery, search — different skeleton. Use ← → to flip, G for this grid.

Party budget calculator

From InstaCalc, the calculator anyone can edit. Maintained by [u/kazad](#); last updated 3 hours ago.

A party budget calculator estimates the total cost of hosting an event by combining [per-guest costs](#) with fixed expenses such as [venue rental](#) and [entertainment](#). Edit any value in the infobox — every dependent line recalculates instantly.

The model assumes cost scales linearly with attendance. For events above ~75 guests, consider the [Catering Tiers](#) remix, which introduces volume discounts. Related conventions include the [50/30/20 rule](#) for household budgeting and the [per-head metric](#) common in event planning.

Calcs as pages in a personal workspace: sidebar tree, breadcrumbs, blocks. Gallery is a linked database at the bottom of the page.

The screenshot displays the instacalc.com interface, which is designed for heavy users with a focus on keyboard navigation. The main area shows a list of calculators, each with a status indicator (green dot for active, grey dot for inactive), a title, a category, and a last updated time. A search bar is visible at the top right of the list. A context menu is open over the 'Tip & Bill Splitter' calculator, showing options like 'New calc', 'Browse gallery', and 'Share current calc'. The right sidebar provides a detailed view of the selected calculator, 'Party Budget', including its status, owner, collection, uses, and a public link. The sidebar also displays the calculator's code and a list of variables and formulas.

Party Budget Mortgage Trip Plan +

Sum: 1,898.33 · Count: 7 Live recalculation: ON

Meets spreadsheet users where they live: ribbon, formula bar, editable cells with row/column headers, sheet tabs as multiple calcs.

The screenshot displays the instacalc.com website, which features a grid of various calculators. The interface is dark-themed with a top navigation bar containing 'Home', 'Explore', and 'Create' buttons, along with a search bar and a notification bell. The calculators are arranged in a grid, each with a title, a brief description, and a large, prominent result. Some calculators include input fields and icons. The calculators shown include:

- Budget**: A calculator for budgeting, showing inputs like 'monthly = 100', 'years = 30', and a result of '100'.
- Compound Interest Visualizer**: A calculator for compound interest, showing inputs like 'serves = 4', 'flour = 2 cups', and a result of '2.75x'.
- BMI & Calorie Target**: A calculator for BMI and calorie target, showing inputs like 'weight = 172 lb', 'height = 5'10"', and a result of '78 kg'.
- Unit Converter Pro**: A calculator for unit conversion, showing inputs like '16 km', 'miles', and a result of '22.2°C'.
- GPA Calculator**: A calculator for GPA, showing inputs like 'credits = 16', 'points = 54.4', and a result of '3.0'.
- Recipe Scaler**: A calculator for scaling recipes, showing inputs like 'serves = 4', 'flour = 2 cups', and a result of '2.75x'.
- Startup Runway**: A calculator for startup runway, showing inputs like 'cash = 480k', 'mo', and a result of '11.4 mo'.
- Loan Comparison**: A calculator for loan comparison, showing inputs like '15yr / mo', '30yr / mo', and results of '\$2,741' and '\$1,962'.
- Currency Trip Budget**: A calculator for currency trip budget, showing inputs like 'budget = €85/day', 'days = 12', and a result of 'total'.
- Payoff Planner**: A calculator for payoff planning, showing inputs like '20,000', '320,000', and a result of '0.062'.
- Road Trip Fuel Cost**: A calculator for road trip fuel cost, showing inputs like 'miles = 1,240', and a result of '\$156'.
- Paint Coverage Estimator**: A calculator for paint coverage, showing inputs like 'area = 640 ft²', 'coats = 2', and a result of '640'.
- Workout Pace Calculator**: A calculator for workout pace, showing inputs like '10k goal = 52:00', 'pace / km', and results of '5:12' and '8:22'.
- Freelance Hourly Rate**: A calculator for freelance hourly rate, showing inputs like 'target = 90k/yr', 'billable hrs', and results of '90,000' and '1,100'.
- Retirement Savings Projector**: A calculator for retirement savings, showing inputs like 'saved = 240k', 'save/mo = 1,500', and results of '240,000', '1,500', and '\$1.9M'.
- Solar Panel ROI**: A calculator for solar panel ROI, showing inputs like 'install = 18k', and a result of '10.3 yr'.
